

Product Overview: Qollabi

Goal:

Qollabi is a SaaS platform built to streamline collaboration between two companies—typically a **provider (e.g. insurer)** and a **partner (e.g. broker or advisor)**. The product helps uncover and act on cross-sell and upsell opportunities in a joint, data-driven way.

Core Components

1. Partner Copilot (Homepage)

- Central inbox for users (insurers or brokers).
- Displays shared updates, mentions, campaign invites, and shared workspaces.
- Acts as the action center for collaborative workflows.

2. Lists

- Houses key entities:
 - **Partners** (e.g. brokers)
 - **Customers** (end clients)
 - **Opportunities**
 - **Projects** (optional, similar to opportunities but more implementation-focused)
- Each list can:
 - Be filtered and saved as **smart views**
 - Be shared with permissions (view/edit)
 - Include dynamic segmentations based on entity attributes
 - Be used collaboratively with other stakeholders

3. Campaigns

- Split into:
 1. **My Campaigns** (created by user)
 2. **Shared Campaigns** (shared with user)
 3. **New Campaign** (created from scratch or from template)
 - Campaign setup flow:
 1. Select a list (e.g. customers or opportunities)
 2. Compose email (AI-assisted, optional logo upload, form links)
 3. Select recipients (linked contacts per customer)
 4. Configure follow-up cadence (e.g. day 1, day 7)
 5. Set sender settings (user's email or via Qollabi domain)
 6. Launch (save or send)
-

Entities & Relationships

Main Entities:

- **Partner**: Name, address, segment, attributes
- **Customer**: Linked to a partner, owns multiple products
- **Opportunity**: A potential cross-sell or upsell moment
- **Project** (optional): Implementation-oriented variation of an opportunity
- **Contact**: Associated with either partner or customer

Relationships:

- One insurer has many partners
 - Each partner has many customers
 - Each customer can have many opportunities
 - Opportunities can belong to multiple partners/customers
-

OKR Component (Objectives & Key Results)

Used to define and track collaborative goals across entities.

Key Features:

- Can be simple (e.g. a to-do) or nested (hierarchical OKRs)
- Attributes:
 - Title, description
 - Target & realized values (currency, number, % or checkbox)
 - Responsible person
 - Timeframe & frequency (monthly/quarterly)
 - Attachments, comments, links, due date
 - Progress bar & traffic light indicators

Templates:

- OKRs can be grouped into templates and assigned to any entity (partner, opportunity, etc.)
- Grouping via tags
- Templates can be partially selected when applied

- Aggregated views possible (e.g. partner performance dashboards)
-

Partner Experience

- Partners can:
 - Create their own Qollabi account via email invite
 - Access similar UI to insurers (Copilot, Lists, Campaigns)
 - Upload customer data (e.g. from BrokerCloud or Portima)
 - Use a **Smart List Wizard** to identify cross-sell/upsell opportunities
 - Launch their own campaigns or participate in insurer-provided ones
 - Maintain private and shared environments
-

Smart List Wizard Logic

- Import customer data from known formats (e.g. Portima)
 - Automatically detect products owned/missing
 - Suggest cross- or upsell opportunities
 - Allow brokers to:
 - Confirm suggested opportunities
 - Save selections as reusable smart views
 - Export or act upon the data
-

Access & Permissions

- Entities and views can be shared with permission control (view/edit)
- Users can:
 - Collaborate live on the same list or OKR page
 - Filter which parts of templates to include
 - Maintain visibility boundaries
