

Standard & System Attributes for Customer Entities

As a user managing customer entities,
I want a predefined set of standard attributes and the ability to add custom attributes,
so that I can structure customer data according to my organization's needs.

Description [↗](#)

The Customer Entity comes with **predefined standard attributes** to ensure consistency across all environments. Additionally, users can **add custom attributes** to capture organization-specific data. The system maintains **system attributes** that are automatically tracked for auditing and operational purposes.

Acceptance Criteria [↗](#)

- standard attributes are **predefined in every environment** and cannot be removed.
- Users can configure whether most attributes are **required**, except for **Name**, which is always required.
- All mandatory attributes are visible in the Customer Entity drawer.
- System attributes are stored in the backend and will not be displayed in the frontend (for now).

Languages [↗](#)

Users need to be able to add the translation of every attribute in the three supported languages.

Standard Attributes (Predefined in Every Environment) [↗](#)

These attributes are **created** for every Customer Entity and can be set as **required** by users, except for **Name and Team**, which are always mandatory.

Attribute Name	Type	Description (this column doesn't appear in Qollabi UI)	Required
Name	Text (Plain)	The official name of the customer.	Yes (this can't be changed)
Description	Long text (plain, later on we'll introduce Rich text)	A brief description of the customer.	No (Configurable: admin can make it either required or optional)

Owner	User (Single-select) → <i>What I mean is that a 'user' with an account needs to be selected. And only one user can be selected.</i>	The primary user responsible for managing the customer entity.	No (Configurable: admin can make it either required or optional)
Team	User (Multi-select) → <i>What I mean is that a 'user' with an account needs to be selected. And multiple users can be selected.</i>	Users associated with the customer entity.	Yes (this can't be changed)
Opportunities	Relationship (One Customer to Many Opportunities)	One to many relationship. The same customer can be attached to many opportunities. The same opportunity can't be attached to more than one customer.	No (Configurable: admin can make it either required or optional)
Partners	Relationship (Many Customers to Many Partners)	Many to many relationship. Many customers can be attached to many partners. The same customer can be attached to more than one partner. The same partner can be attached to more than one customer.	No (Configurable: admin can make it either required or optional)

System Attributes for Customer Entities [↗](#)

These attributes are **internally tracked** by Qollabi, stored in the backend, and will **not be displayed in the frontend** for now.

Attribute Name	Type	Description
Customer ID	Unique Identifier	System-generated ID for the entity.
Created By	User	The user who created the Customer Entity. (Read only)
Created Date	Date-Time	Timestamp of when the entity was created. (Read only)

Last Modified	Date-Time	Modification date and time. This field doesn't track changes made to related list items on the customer. (Read only)
Last Modified By	User	User who last changed the partner data, including modification date and time. This field doesn't track changes made to related list items on the customer. (Read only)
