

Standard & System Attributes for Partner Entities

Description [↗](#)

The Partner Entity comes with **predefined standard attributes** to ensure consistency across all environments. Additionally, users can **add custom attributes** to capture organization-specific data. The system maintains **system attributes** that are automatically tracked for auditing and operational purposes.

Acceptance Criteria [↗](#)

- standard attributes are **predefined in every environment** and cannot be removed.
- Users can configure whether most attributes are **mandatory or optional to complete**, except for **Name**, which is always required.
- All mandatory attributes are visible in the Partner Entity drawer.
- System attributes are stored in the backend and will not be displayed in the frontend.

Languages [↗](#)

Users need to be able to add the translation of every attribute in the three supported languages.

Standard Attributes (Predefined in Every Environment) [↗](#)

Read-only fields that provide information about an entity from the system, like when the entity was created or when it was last changed. E.g., CreatedDate, LastModifiedByID, and LastModifiedDate.

These attributes are **created** for every Partner Entity and can be set as **required or optional** by users, except for **Name and Team**, which are always mandatory.

Attribute Name	Type	Description (this column doesn't appear in Qollabi UI)	Required
Name	Text (Plain)	The official name of the partner.	Yes (this can't be changed)
Description	Long text (plain, later on we'll introduce Rich text)	A brief description of the partner.	No (Configurable: admin can make it either required or optional)
Owner	User (Single-select) → <i>What I mean is that a 'user' with an account needs to be selected. And only one user can be selected.</i>	The primary user responsible for managing the partner entity.	No (Configurable: admin can make it either required or optional)

Team	User (Multi-select) → What I mean is that a 'user' with an account needs to be selected. And multiple users can be selected.	Users associated with the partner entity.	Yes (this can't be changed)
Customers	Relationship (Many Partners to Many Customers)	Many to many relationship. Many partners can be attached to many customers. The same partner can be attached to many customers. The same customer can be attached to many partners.	No (Configurable: admin can make it either required or optional)
Opportunities	Relationship (Many Partners to Many Opportunities)	Many to many relationship. Many partners can be attached to many opportunities. The same partner can be attached to many opportunities. The same opportunity can be attached to many partners.	No (Configurable: admin can make it either required or optional)

System Attributes for Partner Entities [🔗](#)

These attributes are **internally tracked** by Qollabi, stored in the backend, and will **not be displayed in the frontend** for now.

Attribute Name	Type	Description
Partner ID	Unique Identifier	System-generated ID for the entity. (Read only)
Created By	User	The user who created the Partner Entity. (Read only)
Created Date	Date-Time	Timestamp of when the entity was created. (Read only)
Last Modified	Date-Time	Modification date and time. This field doesn't track changes made to related list items on the partner. (Read only)

Last Modified By	User	User who last changed the partner data, including modification date and time. This field doesn't track changes made to related list items on the partner. (Read only)
